

ORION 8%

Filtration Media

Orion is a spherical alumina-based adsorbent media infused with potassium permanganate (KMnO_4) as the active component. Potassium permanganate is integrated during manufacturing, ensuring uniform distribution throughout the process. This media is engineered to effectively remove pollutants such as acidic gases, nitrogen, sulfur compounds, and low molecular weight VOCs. It boasts high adsorption capacity, excellent resistance to moisture, superior efficiency, and is non-flammable.
